

# In Class Exercise/Homework

- ▶ When Get BMI is tapped, the app gets the values, calculates the BMI, then displays the result in a TextView

- ▶ 
$$\text{BMI} = (\text{weight}) / \text{height}^2$$

Recall...

- ▶ `double height = Double.valueOf("1.8");` // converts String to double
- ▶ `String.format("%.1f", 21.6123)` returns "21.6"
