

# Creating an AVD for API 16

We will be creating a virtual device for API 16. This emulator has a smaller footprint and is faster to load.

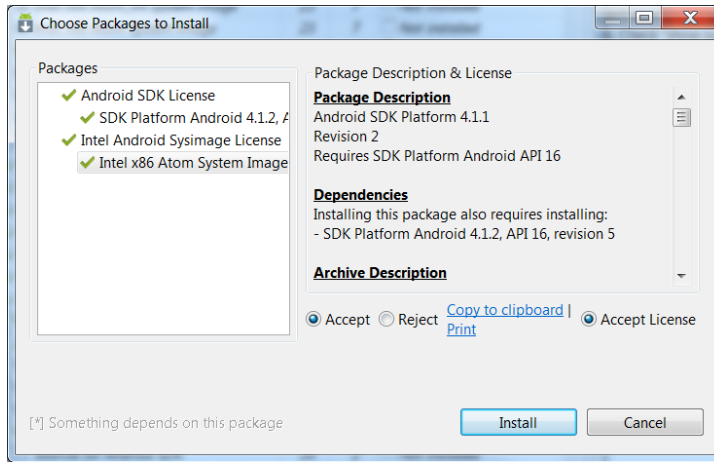

1. Open up the Android SDK Manager.

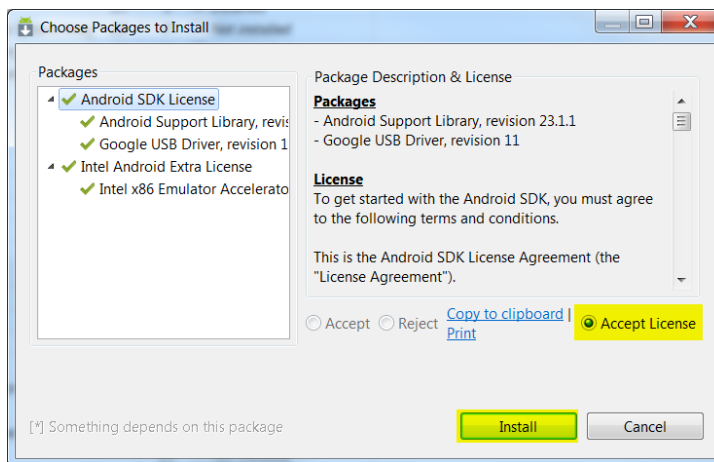

2. Select the Intel x86 Atom Image for API 16 (or ARM image if your processor is not intel)

### 3. Accept the License Agreements and click Install

### 4. Make sure you accept License and then click Install.

5. Create a new virtual device for this API level.
